

# Use Case "Give"

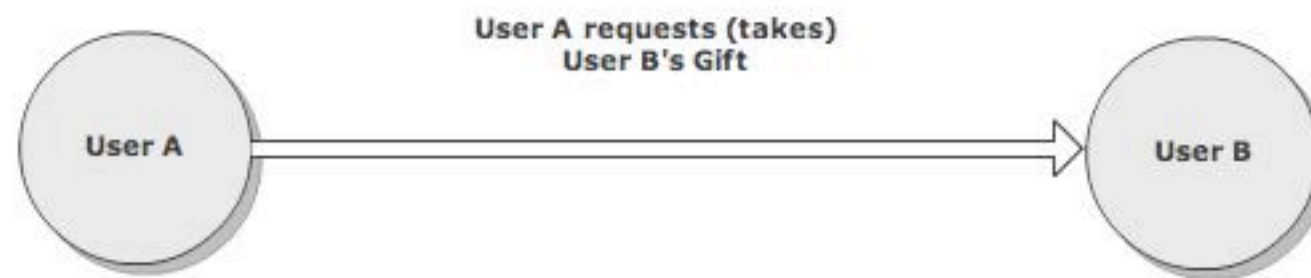

How this is recorded in the database

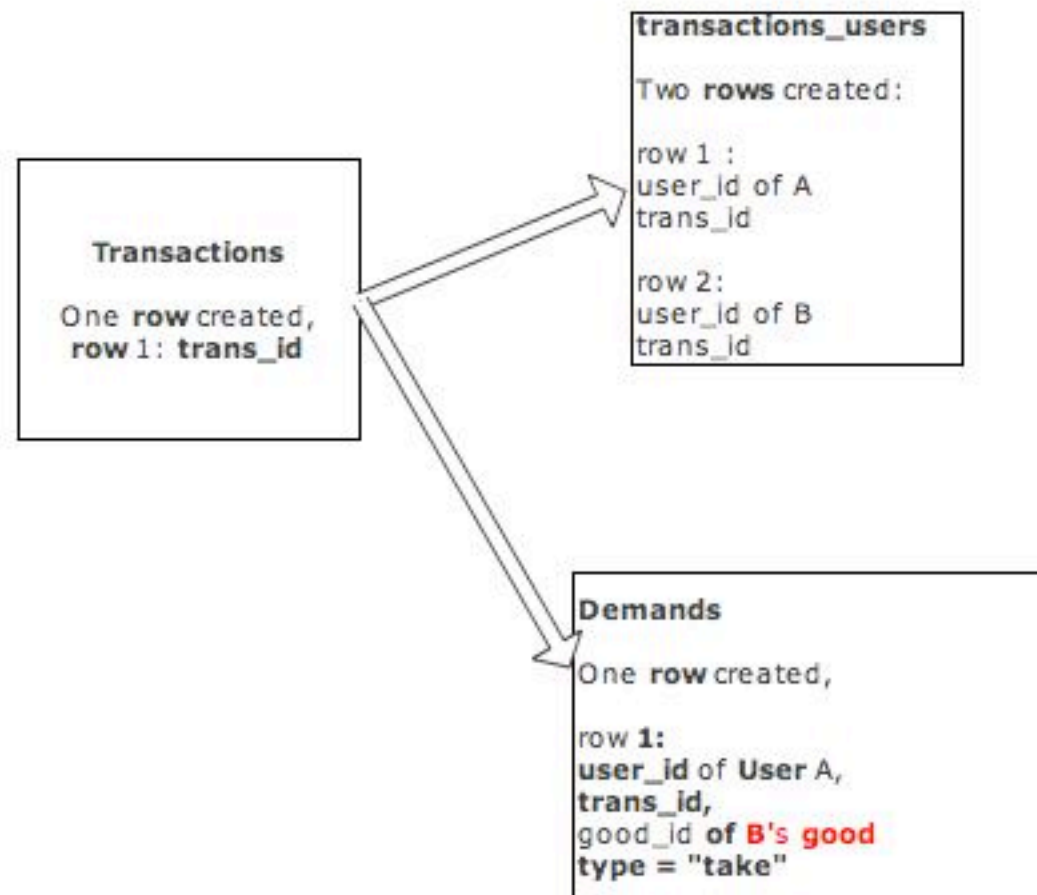

Use Case "Take" is essentially identical except that the Type of User A's Demand is a "take" instead of "give"

# Use Case "Take"

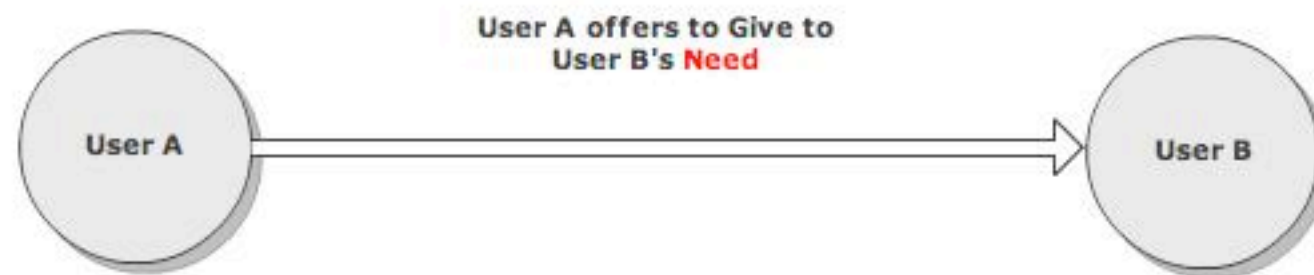

How this is recorded in the database

"Take" and "Borrow" are nearly identical. They differ in the Type column of the Demands table. Also, the Good in question would have a "shareable" property set to 1 instead of 0.

# Use Case "Fulfill"

This can also work in reverse. User A requests User B's Gift to fulfill User A's Need.
